ABOUT CHARDON LABS

We service several breweries and distilleries across 13 states. Founded in **1965**, here at Chardon Laboratories we have seen it all. We have solved innumerable water treatment problems relating to boilers and other maintenance concerns. We opened a research and corporate center in **1992** to facilitate service, technological research, and product development needs. Later, in **1996** we instituted an ESOP program that made Chardon Laboratories 100% employee-owned. With a stake in the company, we attained further incentives to provide quality service work. This led to our ISO 9000 certification in **1997**, which reflects our commitment to deliver promises to our customers. For over 55 years we have put the customer first and strived to provide an essential service in the most efficient, technically viable, and cost-effective way possible.

Chardon Labs
Brewery Water Treatment

BREWERY & DISTILLERY BOILER WATER TREATMENT

At Chardon Labs, we realize the specific needs your brewery or distillery facility has when it comes to boiler operation.

OUR TESTIMONIALS

“The Remote Monitoring provided by Chardon has been a life saver for us. If we lose production, we lose big dollars. My job is to keep production operating efficiently. Chardon helps me do it.”

“Chardon Labs employees are all very knowledgeable and easy to contact. The service representatives actually show up in a service vehicle and are very thorough.”

PREVENT DOWNTIME

Downtime at your facility can be costly. Ensure the company you are working with understands how detrimental downtime is, and has the expertise to prevent it.

● Remote Monitoring

Identify problematic patterns before they become an issue.

● iReport

Our service technicians meticulously report their work. They identify problems and provide educated solutions.

● Boiler Scale, Corrosion, Foaming?

Chardon Labs has a Scale-Free Guarantee. We utilize automatic feeders with scale inhibitor, oxygen scavenger, and de-foamer chemicals. We regularly test for common issues, monitoring water levels, and preventing problems before they occur.

REDUCE COSTS

● Heating Efficiency

For mashing, recirculation, sparging, heating stills, and steam sanitization, your boiler plays an essential role. Heat transfer surfaces with problems, such as scale or corrosion, will significantly increase your boiler's operational cost.

● Repairs & Replacement

Boilers are an expensive investment. The cost of parts, repair time, or replacement will far exceed maintenance costs.
